

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the present application:

LISTING OF CLAIMS:

Claims 1 to 7. (Canceled).

8. (Currently Amended) A method for transmitting information between an infrastructure and data users, the infrastructure including a service provider, the data users including terminal devices in a motor vehicle, the data users having specific different data processing capabilities, the method comprising the steps of:

making a data service available in a standardized format, using the infrastructure; and

via interfaces situated in the infrastructure, adapting data in the standardized format to the different data processing capabilities of the data users.

9. (Previously Presented) The method according to claim 8, further comprising the step of carrying-out a transmission between the infrastructure and the data users via a digital mobile telephone network.

10. (Previously Presented) The method according to claim 8, further comprising the steps of:

transmitting request data from the data users to the infrastructure; and
selecting the data service and at least one of the interfaces as a function of the request data.

11. (Currently Amended) A terminal device for a reception of data from an infrastructure, the terminal device having specific different data processing capabilities for processing the data, the infrastructure making a data service available in a standardized format, the infrastructure including interfaces via which the data in the standardized format is adapted to the different data processing capabilities of the terminal device, the terminal device comprising:

means for transmitting a request signal to the infrastructure via which data is requested from the infrastructure and with which information concerning the different

data processing capabilities is transmitted via the terminal device to the infrastructure.

12. (Previously Presented) The terminal device according to claim 11, further comprising means for exchanging data with the infrastructure via a digital mobile telephone network.

13. (Previously Presented) The terminal device according to claim 11, wherein the terminal device is a car radio with supplementary functions.

14. (Currently Amended) The terminal device according to claim 11, wherein the information concerning the different data processing capabilities of the terminal device includes a terminal device identifier.

DI 15. (Previously Presented) A method for transmitting information between an infrastructure and data users, the infrastructure including a service provider, the data users including terminal devices in a motor vehicle, the data users having specific data processing capabilities, the method comprising the steps of:

making a data service available in a standardized format, using the infrastructure; and

via interfaces situated in the infrastructure, adapting data in the standardized format to the data processing capabilities of the data users;

wherein the data includes geographic information.

16. (Currently Amended) A terminal device for a reception of data from an infrastructure, the terminal device having specific different data processing capabilities arranged to process the data, the infrastructure arranged to make a data service available in a standardized format, the infrastructure including interfaces via which the data in the standardized format is adapted to the different data processing capabilities of the terminal device, the terminal device comprising:

an arrangement configured to transmit a request signal to the infrastructure via which data is requested from the infrastructure and with which information concerning the different data processing capabilities is transmitted via the terminal device to the infrastructure.
